

Automate Sensitive Data Workflows

with On-Premises AI

 **Think**Automation In use with  **Optima**GPT

A Parker Software product

Securely automate your most sensitive business processes.

Automate everything from confidential customer data to critical document processing, knowing the information never leaves your own environment.

Trusted by global brands including:

ThinkAutomation and OptimaGPT combine to deliver AI-driven automation, such as intelligent document analysis, secure chatbots, and natural language data queries, without ever sending sensitive data to external clouds or third parties.

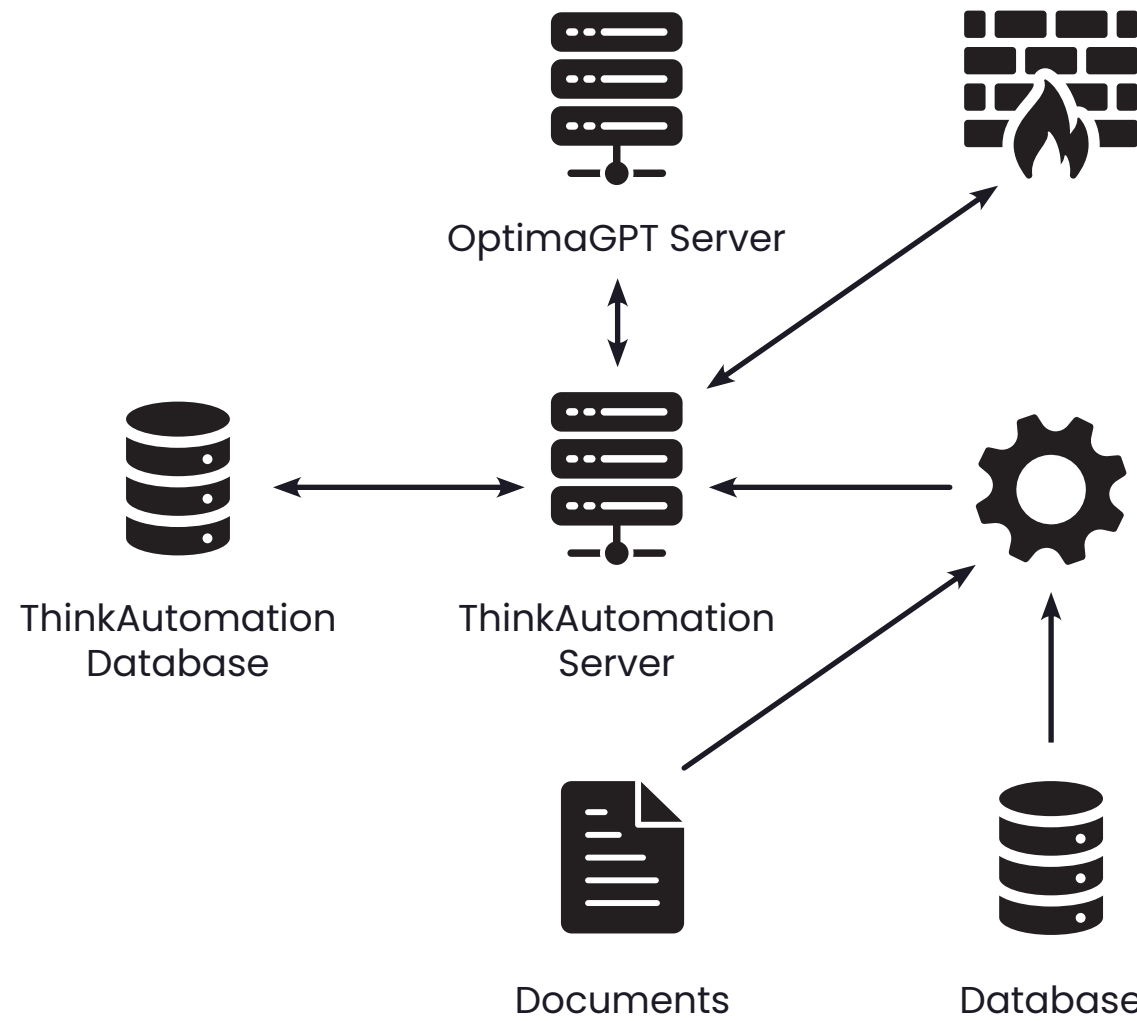

Unparalleled data sovereignty

Enhanced compliance

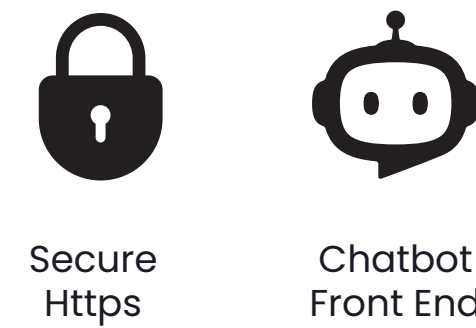

Peace of mind for businesses handling highly confidential information

Your Network

The Internet

End User

Cloud Services

The ideal solution for industries that demand ultimate data security and control.

Financial Services

Banks, insurance, and investment firms handling highly sensitive financial data and requiring strict regulatory compliance (e.g. GDPR, PCI-DSS).

Healthcare

Hospitals, clinics, and pharmaceutical companies processing protected health information (PHI) and needing to adhere to regulations like HIPAA.

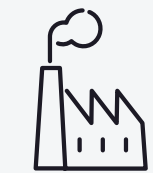

Government & Public Sector

Agencies managing classified or citizen data with stringent national security and data sovereignty requirements.

Legal & Professional Services

Law firms and consultancies handling privileged client information and confidential documents.

Manufacturing

Companies with proprietary production methods, intellectual property, and real-time operational data that needs to remain in-house.

+ Any organisation processing highly sensitive or regulated data.

What is **ThinkAutomation?**

ThinkAutomation is a leading AI-enabled business process automation platform that simplifies complex workflows.

Unlike hosted automation platforms, ThinkAutomation can run entirely on-premises, giving you full control, faster execution, and lower long-term costs.

All ThinkAutomation editions include AI integration, with seamless support for OptimaGPT for fully on-premises AI.

A large, abstract graphic on the right side of the slide. It features flowing, organic shapes in various shades of green, from dark forest green to bright lime green, set against a dark background. The shapes create a sense of movement and depth.

Easy-to-use drag and drop interface

Advanced AI integration

Thousands of actions, one price

Unlimited customisation

Complete control of sensitive data

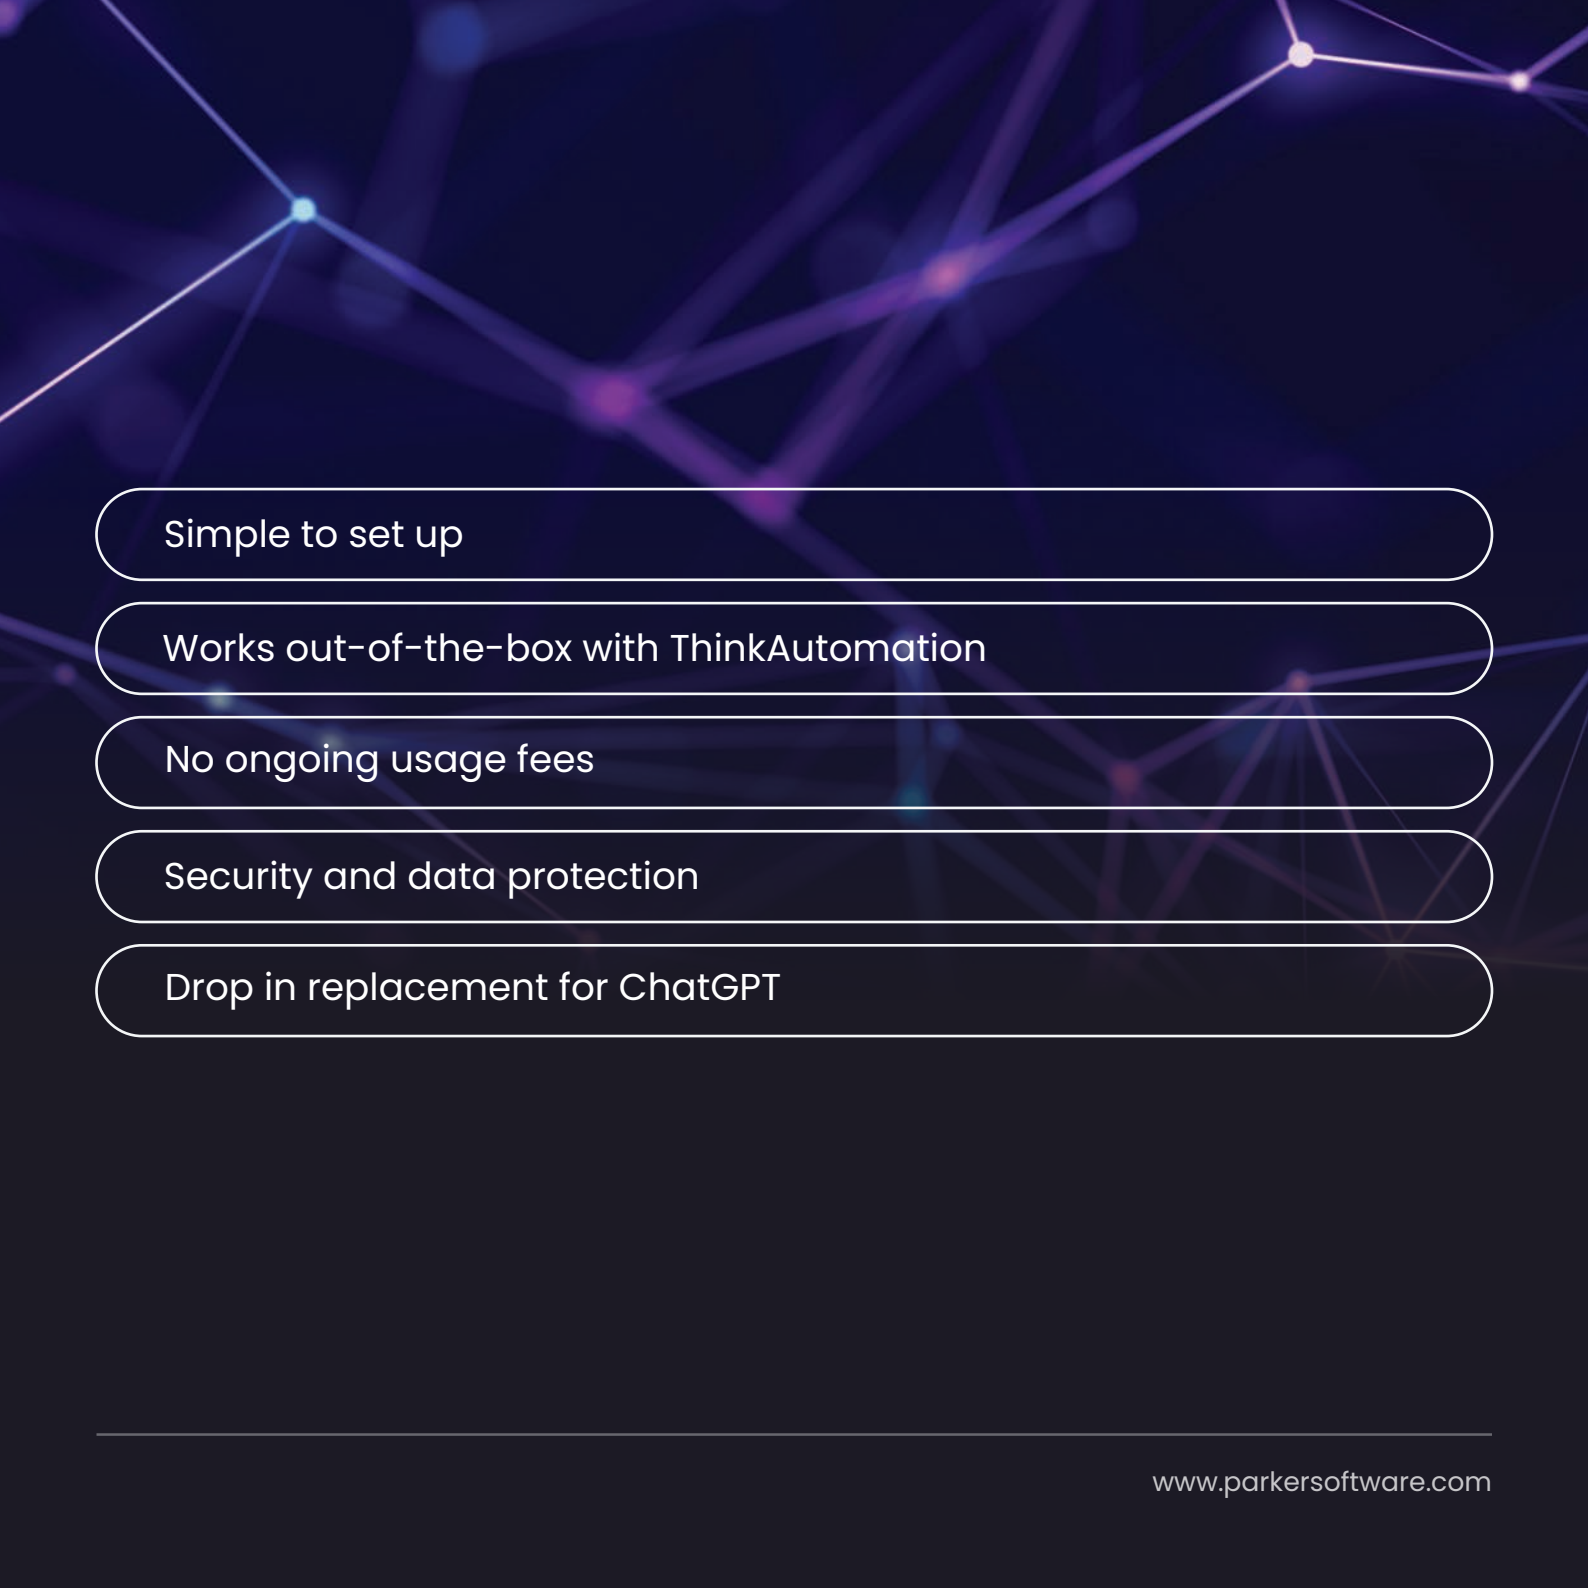

What is **OptimaGPT?**

Unlike public AI servers, OptimaGPT runs securely within your own environment. This ensures complete control over sensitive data, making it ideal for regulated industries or any organisation where using external AI services might raise privacy concerns.

OptimaGPT adopts a 'bring your own model' approach, allowing you to leverage freely available large language models (LLMs) such as Llama and Deepseek.

Our API is OpenAI compliant. Meaning any software that works with ChatGPT, will work with Optima without any changes.

Simple to set up

Works out-of-the-box with ThinkAutomation

No ongoing usage fees

Security and data protection

Drop in replacement for ChatGPT

The **Perfect** Ecosystem

ThinkAutomation and OptimaGPT work together to transform business processes.

Here's just a few examples...

Create Your Own On-Premises AI Chatbot

Develop intelligent chatbots that operate securely within your own network.

Natural Language Data Queries

Ask questions in plain language and get immediate insights from your data.

Advanced Text & Document Analysis

Perform summarisation, translation, anonymisation, and sentiment analysis on your documents and communications.

Intelligent Data Extraction

Accurately pull key information from various sources, even unstructured data.

Automated Email Classification

Categorise and route emails efficiently based on their content.

Chat with Your Own Data

Interact with your proprietary information in a conversational way, unlocking hidden knowledge.
